

Section	Action	Prompt Status	Deployment Status	Testing
Settings	Remove the Settings Tab entirely	Done		
Backend	We will have the following tables at the backend - 1. Sites - these are the locations of the Meta Sites. 2. Products - these are the list of approved products 3. Stock Update - This table is of products along with their quantities which keep on adding if inwards and subtracting post stock update.	Done		
Admin	In Admin section - there should be 5 sections: Products, Sites, Vendors, Status definition, User Access. Each section will contain their own details.	Done		
Admin > Products	Remove the "Download CSV" and the "Upload Excel" option from Product Taxonomy.	Done		
Admin > Products	In the Admin section and then inside "Products"- have a table where one can see the full currently active list of products and provide ability to add more products or delete. Provide the following details - Product Code, Product Name, Brand, Category, Sub Category, MRP, Case Size, UOM(ml/gm/others), HSN Code, GST, Weight (ml/gms), Status (Active/Inactive). Allow users to download it as an excel file. Keep the ability to sort this table on the page itself in case someone wants to see cuts of data. When someone tries to add product, show suggestive items from existing so that they come to understand if this product already exists in the system. In case someone tries to put another product with the same product name or Product code, show error.	Done		
Admin > Sites	In the Admin section and under Sites - give the ability to add "Sites". Just name of the site as one word is sufficient. Add a field in front of sites - "Preferred Days of Stock". The Days of Stock is how many days of stock will the Site store.	Done		
Admin > Vendors	In the Admin section and under Vendors - give the ability to add "Vendors" and give an option to allocate which products they will be delivering. Keep the option of "All products" as default.	Done		
Admin > Status Definition	In the Admin section and Status Definition - give the option to define Critical, Healthy, and Excessive days of stocks. Give a day from and to option against each status. Essentially, this helps define what days of stock is considered critical, what is considered healthy, and what is considered Excessive.	Done		
Admin > User Access	Create the following types of users - 1. Admin user - can access everything 2. Client user - can access everything except Admin, Orders, and Vendiman Dashboard tab 3. Client Approver - can access everything except Admin, Orders, and Vendiman Dashboard tab and has the authority to approve "Suggested order" from the Forecast tab. 3. Vendiman user - can access everything except Admin and Client Approvals Add a table where one can add users - give them Login ID, Password, and define their access type. The tool should only be accessible as per these rules.	Done		
Stock Inward	In Stock Inward, remove "Download template" and "Upload File" options.	Done		
Stock Inward	Give 2 options to Stock Inward - First is, Automatically fetch. Here give the option to enter "DC Code" to the system to fetch the Stock Inward details.	Done		
Stock Inward	Give 2 options to Stock Inward - Second is, Manually add inwards stocks. Here they will first have to fill some details about the DC and then fill the product-wise details. When they will enter Product Name (suggestive products from the Products List) should come when one is typing basis the Vendor (some vendors have limited SKUs mapped to them)	Done		

Section	Action	Prompt Status	Deployment Status	Testing
Stock Inward	The details to be fetched for each Stock Inward are: Common details - 1. DC Code - applicable even if someone is inwarding manually. 2. From - List of vendors 3. To - List of sites 4. Vendor - List of Vendors Item wise details - 1. HSN Code. 2. Product Code 3. Product Name 4. MRP 5. GST 6. Quantity keep the option to delete a particular line item if adding manually.	Done		
Stock Inward	Once you have manually added some products then after they upload successfully, give the option to add more products manually.	Done		
Stock Inward	Once these products are inwarded, they get added to "Stocks Update" Tab	Done		
Stock Update	In the Stock Update tab - there need to be 2 sections - One is Stocks Update section and the other is Stock Update History. In the Stocks Update section, give an option to select Site. Once someone selects the Site, show the last updated Stocks at that Site - Show the following fields - Product Code, Product Name, Brand, Category, Sub Category, MRP and Qty. Right next to it, provide a column "Updated Quantity" where one can update the Quantity basis the stock audit. Every time someone enters some value in the "Update Quantity" column, ask their confirmation before accepting it. Once someone updates the stock, then that becomes the Latest "Stock Update" at that site. Add another column in front of Stock Update called "Preferred Days of Stock" - by default, this number should be the "Preferred Days of Stock" of the Site but give an option to change the Days of Stock by Product. Give an option to the person to download the Stock Update in excel format - in this format, add all fields related to the product.	Done		
Product Performance	In the Product Performance section - add Brand and MRP fields in the table. Change the "Avg Sales Per Day" to "Qty per Day". Qty per day will be manually added. Give an option to "Auto generate Qty per day" which will see the qty of a particular product consumed between the last 2 subsequent stock updates - calculate the number of days between them and hence calculate the Qty of the product that is consumed in a day on average i.e "Qty per day". Give an option to the person to download the Product Performance in excel format - in this format, add all fields related to the product and Qty per day - specifically mention if the Qty per day is manual input or automatically calculated by system.	Done		
Dashboard	On the Dashboard - give the option to select Sites - multiple choice option.	Done		
Dashboard	On the top - there should be 1. "Total Stock Value" - Available products x MRP 2. "Days of Stock" - Average of Days of Stock of all Products. 3. "Critical Stocks" - No of products whose current stock is between the days defined under "Critical" status in the Admin tab 4. "Excessive Stocks" - No of products whose current stock is between the days defined under "Excessive" status in the Admin tab 5. "Healthy Stocks" - No of products whose current stock is between the days defined under "Healthy" status in the Admin tab	Done		

Section	Action	Prompt Status	Deployment Status	Testing
Dashboard	Then give a table with all the Stock Update Products with the following fields - 1. Product Code 2. Product Name 3. Brand 4. Category 5. Sub Category 6. MRP 7. Available Qty 8. Preferred Days of Stock 9. Available Days of Stock - Available Days of Stock is calculated as Quantity of product divided by Qty per day of that product. 10. Status - Assign the status as "Critical", "Healthy" or "Excessive" based on the Available Days of Stock and mapping it against the status defined in admin tab. Give an option to the person to download this in excel format - in this format, add all fields related to the product.	Done		
Dashboard	Remove Mini Kitchen snapshot, vendor orders, and recent stock inward sections from dashboard	Done		
Distribute	Remove this section	Done		
Forecast	Give the option to Select Site. Give a table with all the Stock Update Products with the following fields - 1. Product Code 2. Product Name 3. Brand 4. Category 5. Sub Category 6. MRP 7. Available Qty 8. Preferred Days of Stock 9. Available Days of Stock - Available Days of Stock is calculated as Quantity of product divided by Qty per day of that product. 10. Status - Assign the status as "Critical", "Healthy" or "Excessive" based on the Available Days of Stock and mapping it against the status defined in admin tab. 11. Order Qty - Order Qty should be multiple of Case Size. This will be the order qty of all "Critical" Products required to bring it out of Critical and match the "Days of Stock" number. This should be a multiple of Case Size - roundup wherever needed. Below this there should be an option to "Auto Generate Order" - if clicked, below an order list of products will come up with a unique Order ID at the top. Allow users to change the suggested order qty in this and add/remove products. Then give an option to "Send for Approval" Give an option to the person to download this in excel format - this can be used to place orders.	Done		

Section	Action	Prompt Status	Deployment Status	Testing
Vendiman Dashboard (Under Development)	Create another section called "Vendiman Dashboard" and then Give option to select "Site" and "Upload Vendiman WH stocks". We are essentially trying to map the availability of these products with our warehouse. 2. Once Site is selected, provide the list of stock update products with the following fields from the Site data - 1. Product Code 2. Product Name 3. Brand 4. Category 5. Sub Category 6. MRP 7. Available Qty 8. Preferred Days of Stock 9. Available Days of Stock - Available Days of Stock is calculated as Quantity of product divided by Qty per day of that product. 10. Status - Assign the status as "Critical", "Healthy" or "Excessive" based on the Available Days of Stock and mapping it against the status defined in admin tab.	Done		
Client Approvals	If someone sends a suggested order for approval from the Forecast tab then it should start showing here. The fields that should be visible are - 1. Site 2. Order ID 3. Order Placed By - Share the Login ID of the user who generated this 4. View Order - if they click on this, then below a list of items should appear. 5. They can have the option to "Approve", "Reject" or "Give Feedback" - if they select "Give Feedback" - then allow them to add comments. 6. If the Client Approves the Order, it should start showing in the "Orders" tab.	Done		
Orders	At the top, there should be a provision to select Site. Then show a list of Orders and say status - pending approval, Rejected, Approved, Feedback. Give option to open an order and see the products and quantities on screen and to be able to download as a PDF and as an Excel. Give the option to "Update Status of Order" - it can either be Fulfilled 100%, Fulfilled partially, Dropped, Others.	Done
